For internal audit:

- » Liberate audit teams from manual tasks
- » Enrich the dialogue with the business
- » Enhance the quality of internal audit reports
- » Engage proactively with your board audit committee
- » Contribute to business operational excellence

Facing new challenges on multiple frontiers

The world is rapidly changing for today's internal auditors, whose roles are evolving from cop to counselor. No longer do internal auditors wait for issues to emerge in their traditional role as the third line of defense. Today's internal auditors are proactively engaged with the business – the first line of defense – working in collaboration to ensure the organization is functioning properly.

The business now looks to internal auditors to provide advice and insight into how processes and controls could be improved. **More than ever, the board of directors – working through the audit committee – puts its trust in the internal audit team to provide assurance around existing risks.** The board and senior management are also looking to internal audit to better understand organizational resilience and gain insight into both potential vulnerabilities and opportunities.

These changes to the role of internal auditor are being driven by a wide range of issues that companies of all types are grappling with. Some of the challenges organizations face today, which are impacting internal audit, include:

- Increased connectivity and emerging risks
- A rapidly evolving regulatory landscape
- Consumers and shareholders demanding more transparency
- Increasingly global operations that may include emerging markets
- Recent financial and political disruptions and volatility

As a result of these changes, many internal audit teams are turning to technological solutions to improve the organization and execution of their audit programs.

Internal audit software solutions not only improve efficiency, but also provide in-depth reporting that enables internal audit executives to deliver real value to the business.

Strengthen your organization through better internal audit

Thomson Reuters AutoAudit empowers organizations to make audit processes more effective, as well as simplify complicated stakeholder engagement activities, driving enhanced performance around both core audit objectives and broader strategic ones.

“By automating our internal audit procedures with AutoAudit by Thomson Reuters we were able to significantly enhance our internal audit procedures and ensure adequate control over the quality of our audit work in compliance with International Standards for the Professional Practice of Internal Auditing of the Institute of Internal Auditors.”

A. V. MEKH // DIRECTOR OF INTERNAL AUDIT DEPARTMENT // THE FIRST UKRAINIAN INTERNATIONAL BANK

Thomson Reuters AutoAudit solution enables teams to transform their manual audit management processes into a framework, freeing audit teams to focus on understanding the business, analysis of assessments, and consideration of potential emerging risks. AutoAudit – developed through a close relationship with the internal audit community – supports audit teams in their day-to-day activities, including:

-  • **Information sharing:** AutoAudit stores all audit documents in a single, secure database. AutoAudit uses roles to identify a user's access level and enforces IDs and security passwords across all audits.
-  • **Scheduling:** Managers can quickly manage their audit teams and allocate resources. A drag-and-drop calendar interface takes the pain out of reorganizing the audit schedule. Time-tracking capabilities are also included in the solution.

-  • **Risk Assessment:** Using AutoAudit's integrated Risk Assessment capabilities, audit teams can define and utilize their risk methodologies to better understand high-risk areas and improve the audit-planning process.
-  • **Work papers:** Users can easily create and share electronic work papers. AutoAudit's centralized approach also makes the review process easy for everyone, including auditors in remote locations.
-  • **Issue Tracking:** Issue Track allows audit teams to review and coordinate issues and action plans. Business-line users are notified by email of required actions, and they can enter responses as well as add documentation.
-  • **Reporting:** Users can design, generate, and distribute a broad array of reports. Standard content reports are available or users can create their own customized reports. The push-pull audit committee reports pull data directly from the application into the report template.

Thomson Reuters AutoAudit is used by hundreds of companies, nonprofits, and governmental organizations around the globe to implement audit plans that balance board audit committee and senior management objectives with assurance and regulatory requirements and the need to drive strategic business insights.

More than **one-third** of internal audit teams either have **informal communication strategies** in place or no strategy at all.

Nearly **one-quarter** of internal audit teams have **limited, informal, or undocumented** internal audit policies and procedures.

Almost **two-thirds** of internal auditors say their use of technology to manage the audit process is **basic, limited, or insufficient**.

“AutoAudit combines reliability, convenience, and user-friendliness. It allows a risk-oriented approach to be applied when an internal audit is scheduled, audit documentation and reports to be stored in a centralized manner, and changes to be tracked in remote access mode.”

V. F. DORDZHIEV // DIRECTOR OF INTERNAL AUDIT SERVICE // EURASIAN BANK JSC

The screenshot displays the Thomson Reuters AutoAudit software interface. At the top, there is a menu bar with options: File, View, Go, Database Utilities, Maintenance, Security, Window, and Help. Below the menu is a search bar and a 'My Workspace' section with navigation options like 'Default Workspace', 'Action Plans by Status', 'Audits by In-Charge', 'Information Panel (My Workspace)', 'Issues by Disposition', and 'Workpapers'. The main area features a table titled 'Audits by In-Charge' with columns for Fiscal Year, Audit, In-Charge, Audit Rating, Audit Status, Start Date, End Date, Kickoff Actual Dates, Closing Meeting Actual Dates, and Draft Actual Dates. Below the table are two charts: a bar chart titled 'Issues by Disposition' and a pie chart titled 'Action Plans by Status'. The bar chart shows counts for Secondary Report, Report, Combined, and Pending. The pie chart shows percentages for Open - Ready for Review, Open, Open - Ready For Approval, and Closed. A tooltip is visible over the 'Open - Ready for Review' slice, indicating '10% of 20'.
