A WHOLE NEW PERSPECTIVE
Refinitiv’s China data
China has grown over the last two decades to become the world’s second largest economy. Refinitiv is well positioned to provide invaluable market data on China, as our financial platforms have expanded along with this burgeoning economy. Our market-leading coverage ensures we can help to navigate through the opportunities and risks this region is now presenting, depending on your market focus.
MARKETS

We have a wealth of data on the Chinese markets for investment, insight and research purposes. This data can be managed and analyzed through our platforms; viewed from an aggregate level via sectors and industries; or viewed down to a company level, via stock profiling, business fundamentals, event/filing transcripts, ESG governance data, ownership and company financials. The widest asset class coverage means our platforms are connected to the major exchanges offering real-time and historical instrument pricing.

REGION

Refinitiv has extensive macroeconomic provincial-, county- and city-level data that is sourced from a combination of extensive local and well established international sources, some unique to Refinitiv. These data sources become more pivotal as China moves towards one of the world’s largest consumer economies within the G20. Monitor the population without in-country bias, with our China specialists, Fathom Consulting, skilled in normalizing data from our 1,550+ sources offering fresh insight on official statistics.

OPPORTUNISTIC

We can help monitor specific investment projects in China; get access to unparalleled coverage of financing deals and primary capital markets; get a better understanding of where to invest; secure accurate, up-to-date country risk ratings; evaluate lending and securitization; identify deals; and de-risk investment exposure.

One of the ways we have done this is by partnering our data platforms with our technology expertise to build the Belt and Road Initiative (BRI) interactive investment map, for detailed discovery for project intelligence and financing data.
WHY REFINITIV?

1. China coverage, unique content sets and sizes only available through our platforms

2. Extensive range of tools and technology to provide access to this content (Eikon, Datastream® and feeds)

3. Asset class coverage and the largest range of market instruments

4. Unmatched global peer business fundamentals, to appropriately benchmark chinese companies
Datastream has the most comprehensive global financial historical time series, with market-leading charting capabilities integrated with Microsoft® Office, used by renowned economists, strategists and research communities.

MACROECONOMICS

Over the last two years, China’s growth has been extraordinary. In terms of GDP, China is second only to the United States and it is catching up. Explore Refinitiv’s increased coverage of China economic data to gain an analytical advantage.

- Choose between 350,000+ series direct from over 120 sources including China’s National Bureau of Statistics, China Customs, The Peoples Bank of China and many more

BELT AND ROAD INITIATIVE (BRI)

The immense scale of Belt and Road Initiative presents a unique set of opportunities – and risks – for global investors. The unprecedented creation of new ports, airports, roads and railroads in key developing countries will dramatically reduce the cost of trade and increase the ease of doing business in these areas, transforming connections between Asia and the rest of the world and opening up investment areas in key economic sectors.

The BRI Connect solution helps to put our clients at the forefront of this project. Its ease of screening through deals and projects makes a more engaging way of discovering opportunities. Our broader parameters of BRI projects gives us a more comprehensive database. We cover:

- $3.7 trillion related to infrastructure investments across industries
- Across more than 100 countries (including 84 signed BRI MOU countries)
- Covers over 2,600 projects
- Covers over 3,500 organizations involved in BRI projects

The interactive map is the physical tool for filtering and drilling down to a more granular basis around investments. Get various views and explore projects, for example, along economic corridors or by delivery schedule and bidders.

Discover our BRI app to assess risks and rewards of this project
Unique content sets and sizes only available through our platforms.
