Refinitiv® MarketPsych ESG Analytics analyze corporate sustainability-related news and social media in near real-time.

Powered by MarketPsych Data's AI-based natural language processing engine, the analytics are derived from millions of daily articles in thousands of global news and social media outlets. They provide numerical ESG insights on companies and countries to drive better investment decisions.
Incorporate Refinitiv MarketPsych ESG Analytics into your process

To monitor perceptions of sustainability and ESG risk, Refinitiv and MarketPsych partnered to create multidimensional ESG analytics. The analytics capture key ESG themes in twelve languages for 30,000+ companies and 252 countries and regions.

Rather than scoring sustainability from a company’s own reports, the Refinitiv MarketPsych ESG Analytics feed provides an external news and social media-based perspective on ESG initiatives and performance.

The analytics can be used by:

• Quantitative investors to provide uncorrelated alpha signals
• Discretionary investors to allocate assets and manage risks
• Corporate clients to monitor market perceptions
• Regulators to precisely direct investigations
• Analysts and researchers to discover hidden relationships
• Governments to monitor media reports of ESG factors

Constructed with AI

The software underlying the Refinitiv MarketPsych ESG Analytics is a complex AI-based natural language processing (NLP) engine hosted on a carbon-neutral array of cloud servers. It locates, filters and scores environmental, social and governance-themed (ESG-themed) content pertaining to specific companies as well as cities, regions and countries, it incorporates tens of millions of authors over 2 million articles and posts daily from premium news publishers, internet news sources, ESG blogs and social media.

The NLP engine scores sentiment on more than 4,000 dimensions including specific policies, actions, and themes. As a result, the Refinitiv MarketPsych ESG Analytics can quantify complex meaning in text, including references to such market-moving events as intellectual property violations, management scandals and ESG policy failures.

Coverage

History

History is available from news and social media sources back to January 1, 1998.

Languages

Companies coverage

More than 20,000 active companies from over 120 countries are covered across the feeds and archives:

• 6,000+ Americas equities
• 4,000+ EMEA equities
• 10,000+ AsiaPac equities

An additional 10,000 obsolete companies are available in historical coverage.
Access

Two data packages are available in the Refinitiv MarketPsych ESG Analytics:

Core package:
- Seventeen daily scores from combined news and social media for every company and country.
  - Buzz score (l)
  - ESG Combined score (l)
  - ESG score (l)
  - ESG Controversies score (l)
  - Pillar scores (3 = E, S, G)
  - Category scores (10) provided

Advanced package:
- Provided with access to daily Core scores, plus:
  - 300 analytics for companies (CMPNY-ESG)
  - 456 analytics for countries (COU-ESG)
  - Each advanced analytic updates minutely, hourly and daily

Overall score in the Core package

In the Core package seventeen daily scores are published. These core scores are weighted averages of the underlying Advanced scores, as described below.

The Refinitiv MarketPsych ESG Core data was designed to compare to the core scores in the Refinitiv ESG data. The Core scores utilize the same industry-based weightings and percentile ranking operations as the Refinitiv ESG data. A key difference, and value-add, between the two products is the primary perspective taken by the ESG reporting: external media (MarketPsych ESG Analytics) versus internal corporate documents (Refinitiv ESG data).

Detailed scores in the Advanced package

In the Advanced package, scores for hundreds of ESG indicators are published in near real-time. These items also match counterparts within the Refinitiv ESG framework.

The ESG Advanced Analytics include three broad pillars of ESG indicators:
- Environmental (E) indicators such as Recycling, CarbonEmissionsImprovement and ForestHealth
- Social (S) metrics including WorkplaceConditions, PublicHealthEfforts, and Misinformation
- Governance (G) measures like ManagementTrust, CivicEngagement and SocialUnrest

In addition to traditional ESG analytics, Controversy and Buzz analytics are also provided:
- Controversy (C) scores including AirborneEmissionsControversy, IndustrialAccident and TaxFraud
- Buzz metrics are a proxy for media attention, and they deliver the number of ESG-relevant references to a given asset (company or country locations) in the media
The Analytics in Action

Refinitiv MarketPsych ESG Analytics can be used to inform investment strategies.

Country risk management screening

By displaying the government corruption score, we can see where corruption is being reported throughout the world – allowing analysts to consider this in their investment strategies and business planning.

Research tools and visualizations

By visualizing management trust for companies, investors can easily gain a better understanding of the public perspective on management trustworthiness.
Near real-time corporate risk management

By incorporating management sentiment into analysis, you can catch controversies before they break in mainstream media. The example below shows the reaction of the Tesla stock price and the ManagementSentiment ESG score following Elon Musk’s public substance use on September 8, 2018 during The Joe Rogan Experience.

Quantitative portfolio management

One of the advanced ESG scores is WorkplaceSentiment. In basic quantitative research, when S&P 500 companies are ranked by their past month’s WorkplaceSentiment score, the stock prices of companies with extremely high sentiment (top 5%) significantly outperform those with low sentiment (bottom 5%) month after month. See our whitepapers for our latest quantitative research.
