TRADE OPTIONS STRATEGIES GLOBALLY THROUGH REFINITIV™ REDI® EMS

Options Trading

With Refinitiv® REDI® EMS’s powerful options capabilities, users can easily trade single and complex spread strategies globally through multiple brokers. The platform’s robust, intuitive feature set allows you to manage positions, profit and loss (P&L) and risk in real time while leveraging HotKeys, signals and filters to place complex orders with minimal clicks. In addition, its comprehensive, customizable analytics suite provides option greeks, open interest and volatility indicators.

Multi-broker
Access liquidity via REDI EMS’s expansive global broker network, which includes the algos, smart routers and high-touch desks of hundreds of broker-dealers.

Multi-leg strategy trading
Choose from predefined strategy layouts or create your own. Leverage the spread watch list to see spread market data across a number of strategies.

Powerful analytics
Option windows can provide single and multi-leg greeks and position information side by side with top of book market data. In addition, custom calculations can be deployed for a variety of functions.

Customizable
Tailor data views by creating filters, signals, order proximity alerts and customized expiration date colors.

Flexible
Customize the Option Series windows to your needs by leveraging out-of-the-box filters, including expirations, strike levels and composite vs. specific exchange market data.

Product coverage
Trade single and complex contracts, including calendar spreads, straddles, strangles, married puts, buy-writes, butterflies and more.

Multi-leg top and depth of market views
Display real-time market data for single contracts and multi-leg strategies in the Option Montage window.
2 Trade Options Strategies Globally Through Refinitiv REDI EMS

Key features

1. **Custom Filters**: Customize filter buttons to quickly display only relevant securities during specific trading scenarios.
2. **Filter**: The number of strikes that will display around the underlying price (e.g., ‘3’ will display three strikes below/above the underlying price).
3. **Choose to display** Composite or Top of Book market data for a specific exchange.
4. **Custom Signals**: Configure the Option Series window to alert or highlight when certain customizable conditions, such as when the last traded price is the day’s high, are met.
5. **Choose Destination** to select from the many available destinations in REDI EMS’s extensive broker network.
6. **Filtering**: Quickly filter the Option Series window for expirations, composite vs. exchange market data (LI), and number of strikes around the underlying price.
7. **HotKeys**: Create HotKeys to rapidly enter broker orders with previously configured parameters.
8. **Order Proximity**: Configure the Option Series window to alert or highlight when open orders are within the current prices. For example, marketable orders will have a red background, while non-marketable orders will have an orange background.
9. **Expiration Coloring**: Enable expirations to appear within the Option Series window and in the filter selection in different colors.
10. **Shift Click** on the Bid/Ask of a contract to go long or short and create a predefined or custom spread strategy.
11. **Quick L1 Exchange View**: Quickly show/hide a breakdown of L1 market data from all exchanges for a single call/put.
