

# RULES-BASED ORDER ROUTING

**Achieving new efficiencies within a flexible  
end-to-end trading solution**

Not every trade presents the opportunity to add significant value. Rules-Based Order Routing provides a flexible, cost-efficient solution to automate trading, enabling you to focus on orders requiring your attention.

## **Global, flexible and efficient**

Rules-Based Order Routing enables you to automate trading workflows across a number of different asset classes. Our solution is fast and flexible, allowing you as a trader to set a number of order routing rules that determine the trades to execute automatically and which ones to reserve for manual intervention. Importantly, the product helps you implement your policies to enable and demonstrate best execution compliance.

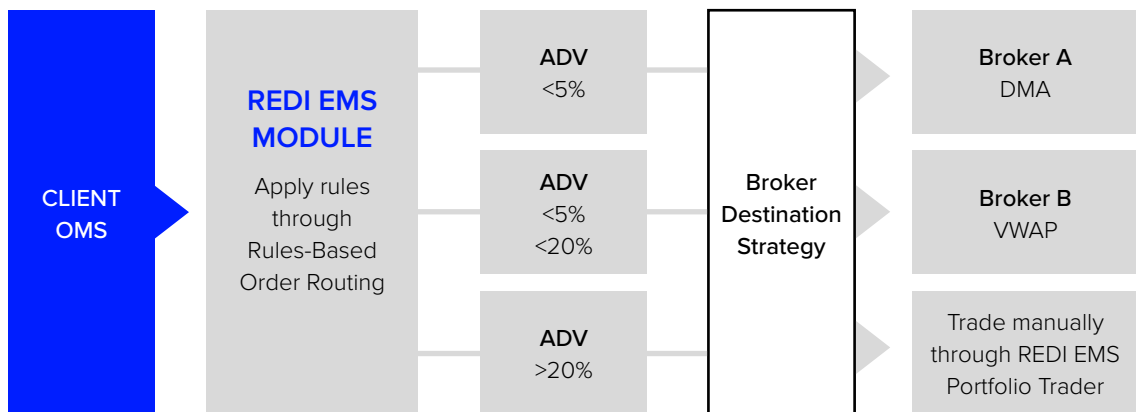

With unique visualization tools, we make it configurable to your preferences and needs. It is transparent, giving you the ultimate control over your electronic trading environment as well as end-to-end visibility and support for your regulatory compliance.

- Available as an add-on to Refinitiv™ REDI® EMS or Autex® Trade Route
- Uses Refinitiv data to set rules across a number of complex parameters
- Configure rules to route orders to specific brokers, algorithms or venues
- Trade across multiple asset classes
- Highly scalable throughput across multiple orders

## Rules-Based Order Routing within REDI EMS

### Example

Trader ABC creates a basket of orders to be sent to the market. Each order is processed through the Rules-Based Order Routing add-on based on a set of defined rules. The rules-based system automatically routes orders to a broker, or multiple brokers and/or algos, for execution, based on your predefined rules. The trader also has the option to trade manually depending on the parameters in place and can monitor automated trades in real time for quality assurance.

Note: Clients need to have a contract with REDI and Refinitiv as well as the routing recipients.

### End-to-end trading made smarter, faster and more efficient

Refinitiv end-to-end trading solutions are easy to use, streamline your workflow and provide actionable insight so you can trade smarter, faster and more confidently. Rules-Based Order Routing brings additional efficiencies into the mix, enabling you to conveniently and compliantly automate the most basic parts of your workflow, leaving you free to focus on the high-value trades that demand your expertise.
